

# CASE HISTORY

## The company

**Archiva Group** is a team of companies born from the 30-year experience in digitisation and digital storage of Archiva Srl. The group's companies specialise in the areas of document management, hyperautomation and consultancy on regulatory, digital and methodological review of business processes.

**+280**  
employees

**+1Mln**  
GB of archived documents

**+1600**  
active  
customers

## The success story

For Archiva, **security** has always been a **fundamental prerequisite** to perform its work and guarantee customers the highest level of information protection.

For this reason the company has decided to further evolve the security of its infrastructure with the services of the Würth Phoenix **Security Operation Centre**.

Specifically, it is an Attacker Centric SOC that is able to **intervene in a predictive manner on possible security vulnerabilities**. The solution integrates with the existing security infrastructure, protecting all the companies of the Group and offering the most complete protection of the data, which the more than 1600 client companies entrust to Archiva Group every day.

### Business outcomes

- Improvement of security incident detection through continuous monitoring and analysis of data activity;
- Shifting from corrective to predictive logic in anticipating possible security issues also in the protection of personal data;
- Proactive protection: the SOC implements preventive measures to mitigate threats and improve the organisation's overall security.

## The words of...

**Luciano Quartarone – CISO & DPO**

*«This type of technology is used by leading organisations globally to protect systems and services. We are very proud to be able to offer companies a complete, improved and increasingly secure offering.»*
