

NETEYE CONFERENCE 2025

Scaling Service Management Practical Approaches with Align Project

Roberto Bacchini, Technical Consultant Würth Phoenix

Everyone has waited for a critical ticket at least once in his/her life

IT services have been business critical for a long time now.

IT services are increasingly multi-layer, multi team and global.

Scaling ITSM services on global scale is a 'must win' challenge

+ Ai has entered the chat!

Meet Würth IT & Align – in numbers

12 central IT departments

120 central teams

80000+ serviced customers

300+ distributed companies

5000+ local it team

(your urgent ticket is lost here)

The problem(s) to solve

*Break down IT silos,
deploying a modern, ai powered, global ITSM/ALM platform*

Modern ITSM/ALM platform
Ai enabled

Break down silos
Deploy global

Tame the Robot: Technology Challenges

**OVER-
CUSTOMIZATION**

**LEGACY
INTEGRATION**

**SCALABILITY &
PERFORMANCE**

**SECURITY &
COMPLIANCE.**

**AI EXPECTATIONS
AND OVERHYPE**

Win Over the People: Human Factor Challenges

**GOVERNANCE &
SPONSORSHIP**

**PROCESS
RESISTANCE**

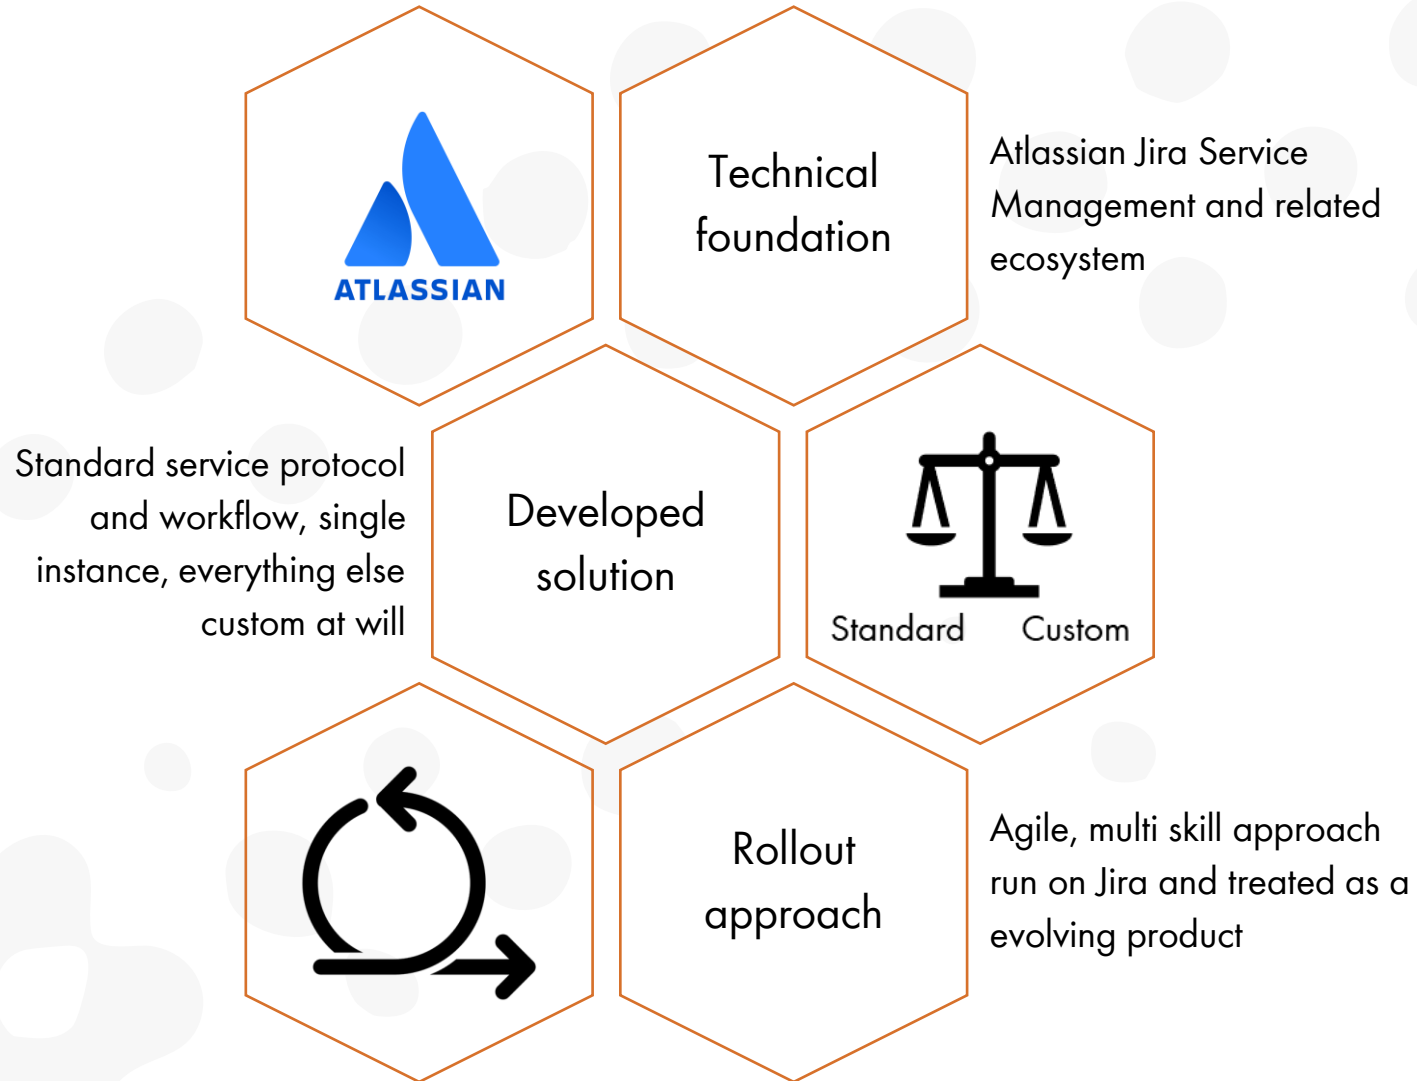

**CHANGE
MANAGEMENT**

**PROGRAM
COMPLEXITY**

Align 3 elements recipe

The Atlassian Stack: ITSM Powerhouse

- We built Align on Jira Service Management, Confluence, Assets, and powerful automation—each tool playing a key role.
- Key features:
 - Designed for enterprise and global
 - Ample configuration options
 - Flexible permissions
 - Designed in the right philosophy

Teamwork Graph – the data model to fuel the Ai

- Every Atlassian App and solution shares the same data model
- It collects work, pages, ideas, service requests, projects, and more.
- It **breaks silos** at a foundational level -> Act as an **agent of change**

Standardizing ITIL workflows at Scale

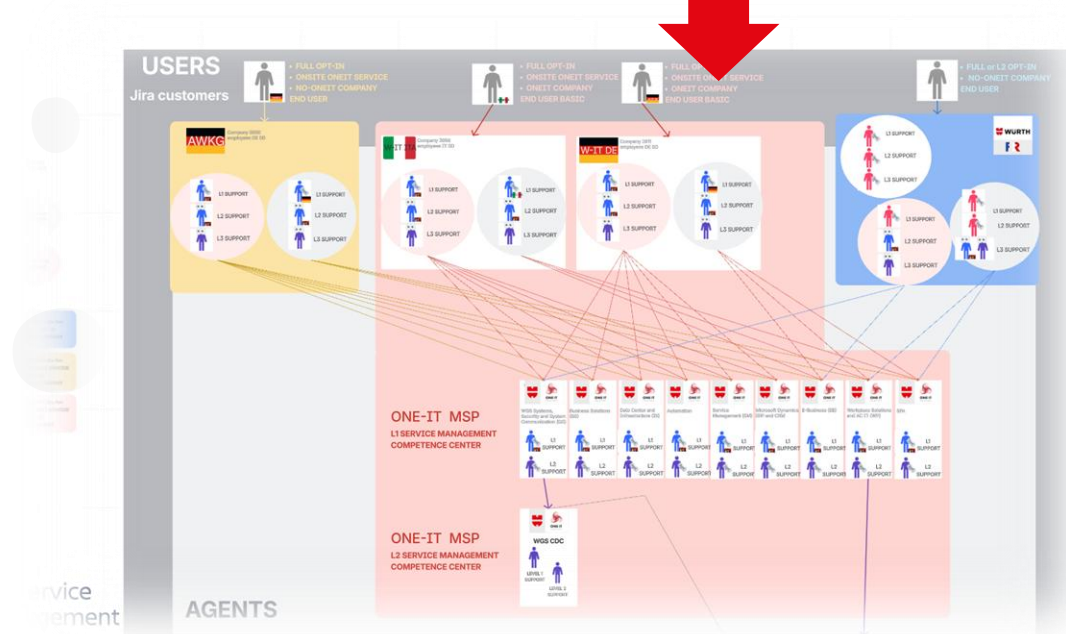

○ Centralized - for enabling communications

- Workflows
- Service contracts
- Escalations

○ Custom - to apply

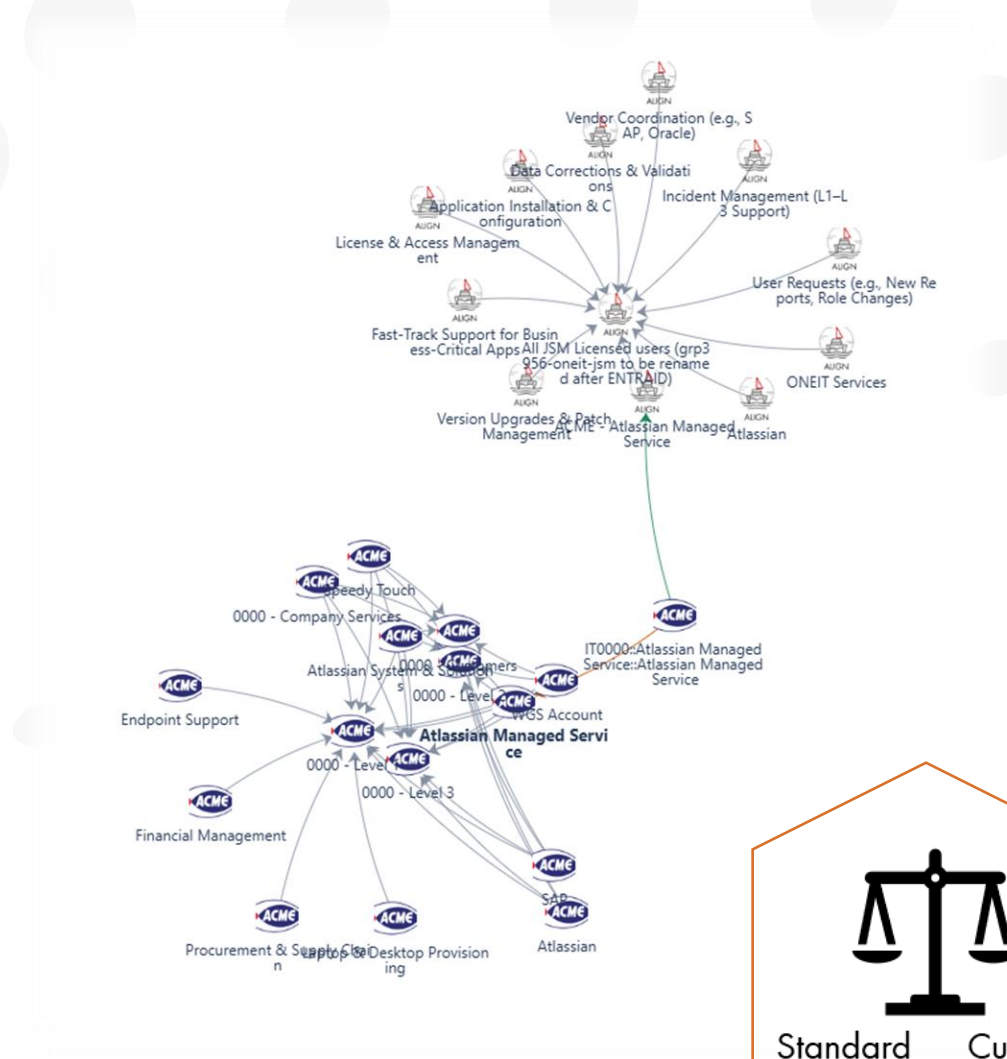

- Request format
- Service list
- Customer experience
- ...basically everything else

Service Contracts – the bridge between edge and center

- JSM Asset + automations as foundation
- Connects and control handovers from Local to Central services
- Creates point to point visibility at scale

Standard Workflows

- Built on the teams acting on requests
- Acts as a protocol for agents on different companies/countries to communicate
- Can iterate on itself

Standard Workflows as team loops

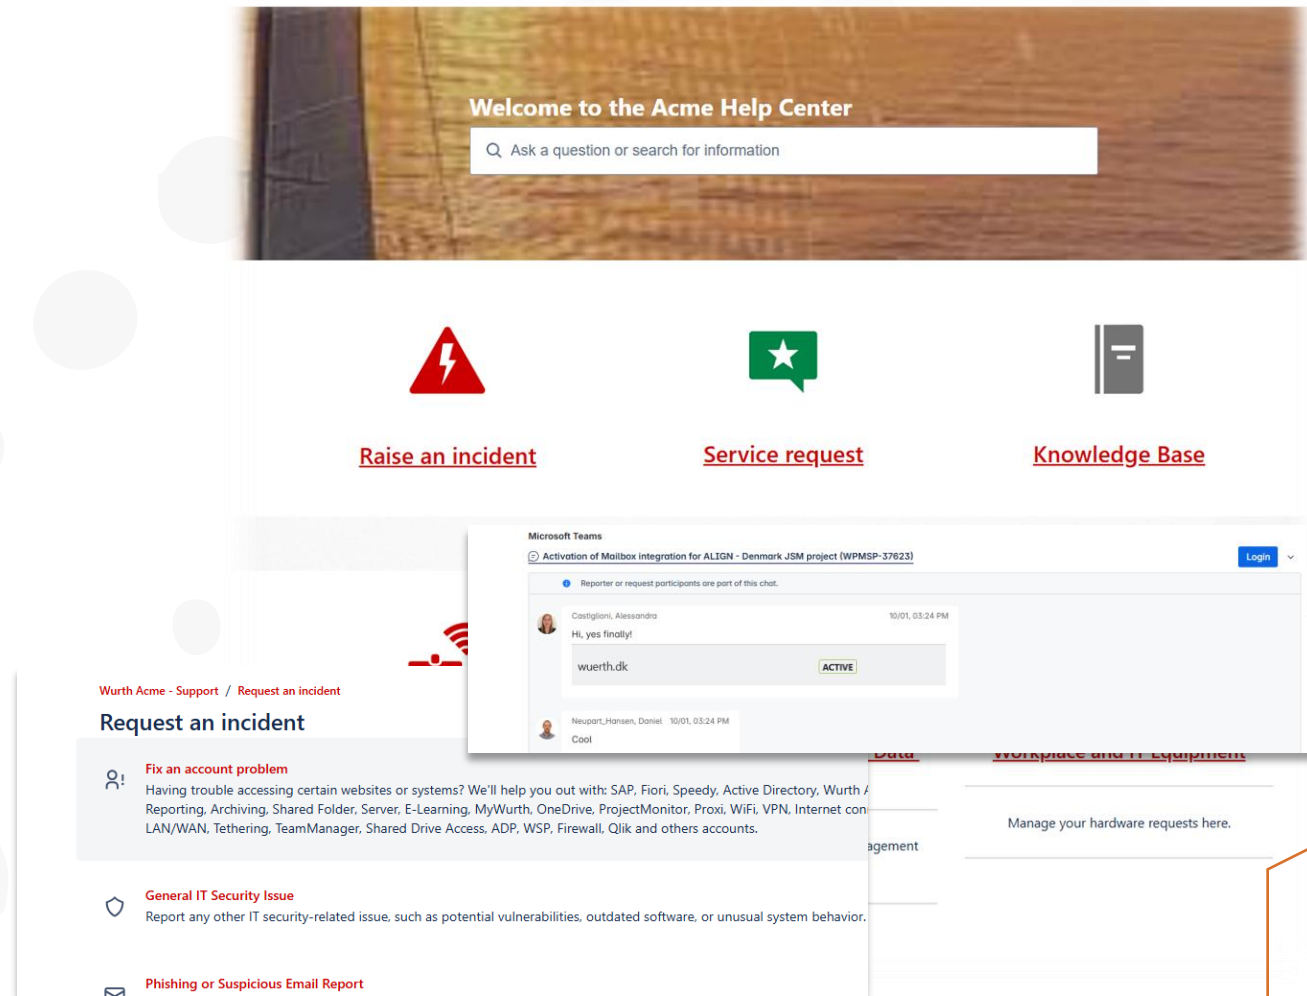

- Use the loop design to enable different resolution paths
- Each team can either
 - Handover
 - Collaborate
 - Escalate
- Single source of truth kept all the time

(Almost) fully customizable – in autonomy

- Requests and forms
- Intake channels
- Portal
- Notifications
- Translations
- Agent view
- Canned replies
- Knowledge Base Articles
- ...

Rollout with feedback

- Each deployment works by engaging few, key people
- We deploy a fully usable project from day 1
- We ask what done means and loop back to it once workshops are over

We incorporate lessons from each rollout in the solution

agile ITERATION

It's about empowerment

- We look for technical people to become Project admins
- We strongly encourage hands on tests
- We enable a flexible pace of service rollout

The ultimate goal is to feel the adopters EMPOWERED by the new solution

Enabling smart AI

- All knowledge bases become accessible
- All resolutions patterns becomes accessible
- Concept and data models are defined (team, service, request...)

Rovo, state-of-the-art Ai is enabled at each deployment

Align brings scalability to services

Atlassian Cloud Platform + Expert Design + Agile rollout

+ Ai

Each Ticket, timely

Thanks for your attention!
